

## **Madeline Clark, Data Operator**

Madeline Clark joined SVA's research team in June 2019 with a strong background in data analysis and visualization. Her work at SVA has primarily focused on the Life Cycle Atlas project, which aims to provide a comprehensive look at different paths student veterans have taken since graduating from high school. She also provides qualitative analysis for several other research projects, creating visuals for open-ended questions that may otherwise be overlooked.

Madeline comes from an academic research background, having worked in several research labs as an undergraduate and having conducted her own research as a graduate student. Her experience includes experimental research, surveys and questionnaires, interviews, focus groups, and a comprehensive knowledge of several research methodologies. In terms of technology, she has a mastery of Python and R, as well as an inclusive understanding of SQL, Tableau, SPSS, and JavaScript, to assist in her data cleaning, analysis, and visualization.

Her academic experience allows her to have incredible writing skills and confidence in giving presentations. She holds a Bachelor of Arts in Linguistics and Japanese from the University of Rochester and a Master of Science in Linguistics from Georgetown University, where she specialized in second language acquisition. A native from southern Maine, she currently resides in Arlington, VA.
